

Because of corporate responsibility your employer has installed a system (Blank-it) that ensures the safest possible use of in-vehicle computers.

Blank-it provides an easy, safe and legally compliant way of managing in-vehicle computer displays and addressing driver distraction by restricting user access to the screen when the vehicle is in motion.

Blank-it User Guide

1. The computer will automatically find Blank-it on Start-up
2. When the vehicle is in motion your computer screen will blank
3. When the vehicle is stationary full functionality returns to the in-vehicle computer
OR
Click / Tap the 'Vehicle Stationary' icon
4. Your employer/IT administrator may have nominated certain programs or software that you can legitimately/legally use while the vehicle is in motion. These are known as 'allowed' programs
5. Your allowed programs will be displayed as icons on the blanked screen. Open and cycle through your allowed programs by voice activation, touch screen or a hotkey.

Nominated and allowed programs

Vehicle Stationary icon

Example of a blanked screen showing allowed programs and the vehicle stationary icon: Cycle through your allowed programs by voice activation, touch screen or hotkey.

6. Your employer/IT administrator may have disabled your Keyboard and or mouse/touchscreen when the screen is blanked. Full functionality is returned when the vehicle is stationary. The Hotkeys for cycling through nominated programs or enabling the Privacy Screen are not disabled.
7. A privacy screen to blank anything on the screen when the vehicle is stationary or moving can be started and stopped by a hotkey. The hotkey default is F9.

Example of a privacy screen. The hotkey default is F9 to enable and disable the privacy screen.
